

## Pontiac Vibe: How to remove A/C bezel and replace power outlet and inverter

You start with this (my bezel had damage to the A/C face and cigarette lighter area)

Remove the center knob (it just slides right off) and screw

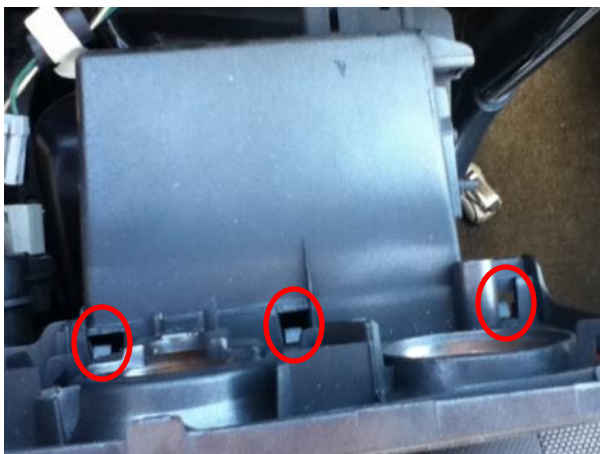

Pry top of A/C bezel away from Radio bezel. Go slowly as the other 2 knobs bind the bezel a little.

Pry bezel by bottom of shifter, and then gently release each side using shift cover for leverage. Note: the bezel is held in on the back and the bottom by clips, so this step is a little tricky, go slowly and don't force anything, it will eventually come out. The bezel should come loose with just the wires holding it in.

Remove the wires for the cigarette lighter

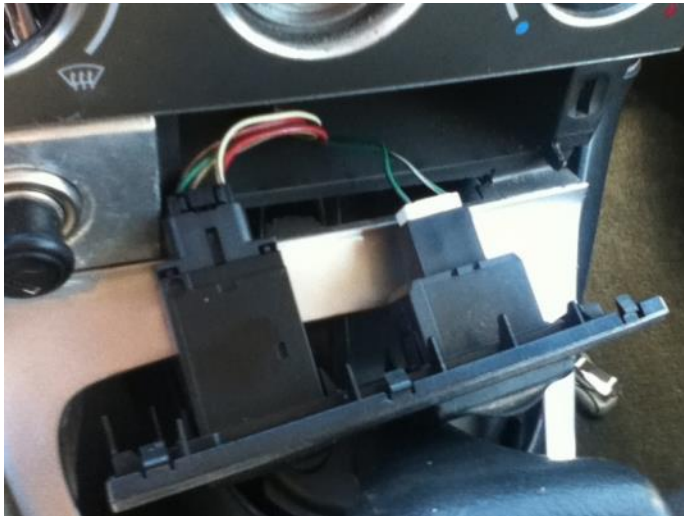

Loosen the 3 retaining clips on the back of the inverter housing

Gently pry one side of the inverter bezel hinge off, be careful not to break the hinge.

Gently pry the other side of the invert bezel hinge off, be careful not to mar the cigarette lighter bezel.

Inverter bezel removed. Now disconnect the wires and you can remove the entire A/C bezel. Note: better view of the 3 retaining clips on the top of the inverter bezel .

Everything removed, now you can reinstall in the reverse order.

The new A/C bezel installed.
